eggplant

We are pleased to announce our collaboration with Eggplant to promote their range of products. Eggplant is an international software business based in London & having development centers in the USA and UK with sales and support centers in USA, UK, Germany and China as well.

The Eggplant range of tools can handle all kinds of testing, from functional to performance, load testing & network emulation. The tools are relevant in agile, mobile, web, DevOps deployments & are currently used in over 30 countries by over 350 enterprise customers in sectors including Defense, Aerospace, Financial Services, Automotive, Healthcare, Life Sciences, Media, Entertainment & Retail.

Tools

☞ **Eggplant Functional:** Eggplant Functional is a test automation tool. Test any device, any operating system and any technology. use it for the entire testing process, from authoring scripts to evaluating results. Create tests with record-and-playback functionality.

☞ **Eggplant AI:** Eggplant AI is a single-screen web app that uses learning algorithms to auto-generate tests. The model-based approach of Eggplant AI makes it easier to develop tests for dynamically generated content, like websites and mobile apps.

☞ **Eggplant Performance:** Set of tools for load and performance testing of application clients, servers, networks, and network devices. Eggplant Performance testing simulates the actions of real users with efficient, low-overhead, and consistent virtual users (Vus).

☞ **Eggplant Manager:** Test management system that lets you manage your Eggplant Functional suites, define tests, schedule test runs, and analyze results all in one central location: Your web browser. Eggplant Manager provides you with the easiest way to run multiple tests or instances of a test simultaneously against different devices.

☞ **Eggplant Automation Cloud:** Reservation system used to facilitate controlled remote access to a centralized pool of systems under test (SUTs). This pool can include mobile devices, physical machines, and virtual machines.

☞ **Eggplant Network:** Powerful network emulator which makes it easy to test your mobile, browser, or client-server application under different network conditions.

☞ **Eggplant Integration:** Collection of simple integration plug-ins for some of the most popular continuous integration and ALM tools to make integration easy.

☞ **Eggplant Manual:** You can connect to a wide variety of platforms and device types. Eggplant Manual provides full control of the system being tested.

☞ **Eggbox:** Appliance which includes a range of pre-configured eggPlant test automation and test management tools to immediately set up your test lab or Testing Center of Excellence

Benefits

☞ Test any technology and any platform
☞ A single script can test multiple environments
☞ Testing with real devices and eggCloud
☞ Integration
☞ Test end-to-end test-case from a single script
☞ Test 3rd party applications and components
☞ Test the user perspective not the code perspective
☞ A complete range of test tools

Industry

☞ Defense and Aerospace
☞ Healthcare and Life Sciences
☞ Finance
☞ Automotive
☞ Enterprise
☞ Media and Entertainment
☞ Retail
