

G.T. Enterprises is happy to announce that we have tied up with Puppet Labs to promote their range of products. Puppet is a configuration management system that allows you to define the state of your infrastructure, then automatically enforces the correct state. Whether you're managing just a few servers or thousands of physical and virtual machines, Puppet automates tasks that sysadmins often do manually, freeing up time and mental space so sysadmins can work on the projects that deliver greater business value.

Puppet Enterprise Benefits :

Speed:

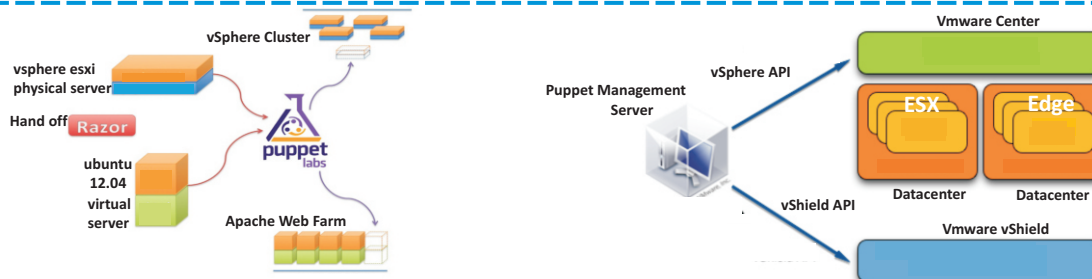

Reduce cycle times to get more software deployed faster. Because you know the exact configuration of your machines, you can make fast, iterative changes. Puppet Enterprise abstracts desired configuration from the underlying infrastructure making it possible to shift on a dime.

Productivity:

Instead of manually running the same script a thousand times over, you can define a configuration once, and apply it to thousands of machines. Puppet Enterprise monitors every device's desired state configuration and automatically remediates configuration drift so you have consistent, predictable infrastructure.

Insight:

You get detailed insight into the exact hardware and software configuration of your machines and devices. Instead of sifting through log files, you get graphical view of your infrastructure changes, including the ability to quickly see what changes and how those changes came about.

Razor Hand off

Services

Puppet Labs provides enterprise Puppet support, training, and professional services for those who want to maximize the efficiency and scalability of their Puppet Enterprise implementation.

Puppet Labs offers

-  Certification
-  Support
-  Professional Services
-  Public & Private Training
-  Events

Puppet VMware

Puppet Works

-  Fact collection
-  Catalog compilation
-  Enforcement
-  Report
-  Report sharing
